### DETAILED ACTION

Applicant's election with traverse of Group VII in the reply filed on 3/9/05 is acknowledged. The traversal is on the ground(s) that the claims in Groups I-XII require common elements and do not require an additional search. This is not found persuasive because the search is based on different structures of each group and constitute an undue burden in that the search for one of the inventions does require different components and no error in the reasons for the requirements have been pointed out by Applicant.

The requirement is still deemed proper and is therefore made FINAL.

Claims 1-8, 36-42 and 47-61 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 3/9/05.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 43-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Chem Abstract 137: 217352.

The reference discloses the synthesis of a phenoxy sulfonimide functionalized polyphosphazene copolymer in that poly(dichlorophosphazene) reacts with sodium 4-methylphenoxide and sodium sulfonimide phenolate.

The disclosure of the reference differs from the instant claims in that it neither disclose the claimed conditions nor the claimed formula.

However, the reference does disclose the required reactants under conditions to form the same or similar products. Therefore, it would have been obvious to one of ordinary skill in the art to select reactants under process conditions from the reference within the limitations of the instant claims since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said selections.
